

# Winfrasoft Gateway Appliance

running Microsoft IAG 2007

Sales Datasheet

Winfrasoft.

## Gateway Appliance

running Microsoft IAG 2007

### Appliance highlights...

#### Access Control

- ✓ Granular policy-driven access to head-office resources
- ✓ Flexible SSL VPN access from any device or location
- ✓ Comprehensive basic and form based authentication
- ✓ Support for client/server and legacy applications

#### Asset Protection

- ✓ Application-layer firewall
- ✓ Comprehensive monitoring and reporting
- ✓ Custom application publishing and scripting
- ✓ Protocol validation and content inspection

#### Benefits

- ✓ Tier 1 hardware platform
- ✓ Built-in hardware redundancy
- ✓ Hardened secure O/S
- ✓ Microsoft IAG 2007 SP2
- ✓ Reduced operational and management complexity
- ✓ Simplified infrastructure
- ✓ Fully upgradeable hardware
- ✓ Online partition backup snapshots

### How do you remotely connect?

Do you want to access your resources on a corporate network from any location, using a variety of devices, in a safe and secure manner?

Now you can access your network using different types of end-point devices such as kiosks, PCs, and mobile devices, via a standard web browser over a secure SSL-VPN tunnel. Remote client access is secured by an integrated network perimeter defence system and the levels of resource access are controlled by an extensive and very granular policy set. Protection levels can even be established at the application layer. **Microsoft IAG 2007 is the recommended platform for securing MOSS deployments.**

### Microsoft IAG gives you...

#### Access Control

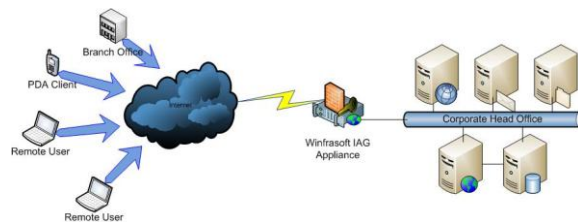

Secure, browser-based access to corporate applications and data from more locations and more devices without requiring client installation and provisioning.

#### Asset Protection

Integrated application protection helps ensure the integrity and safety of network and application infrastructure by blocking malicious traffic and attacks.

#### Information Safeguarding Mechanisms

Comprehensive policy enforcement helps drive compliance with legal and business guidelines which require information usage criteria to limit exposure and liability when accessing sensitive corporate data.

### Easy Deployment

Winfrasoft Gateway Appliances running Microsoft IAG 2007 (Microsoft Forefront Edge Security and Access) provide customers with an easy to manage, hardened tier 1 platform device with built in configuration wizards to simplify and reduce deployment time.
