

# Winfrasoft VPN-Q 2006

Datasheet

## Overview

Winfrasoft VPN-Q 2006 is the **premier** VPN Quarantine and compliance solution for deploying and managing secure VPN services with Microsoft ISA Server and Windows RRAS.

The ease of deployment and tight integration with Windows and Microsoft technologies make Winfrasoft VPN-Q 2006 the perfect security addition to any Windows VPN deployment. Its low TCO model makes Winfrasoft VPN-Q 2006 a more than viable alternative to complex and expensive SSL VPN solutions.

Supports over 90% of AV products. Tested with over 22 Anti-Virus and 12 Personal Firewall products including the 2006 TopTenREVIEWS AV software list.

- ✓ Active Directory® (required for management)

### Minimum Client System Requirements

- ✓ Windows Vista or
- ✓ Windows XP with Service Pack 2
- ✓ .NET Framework 1.1 or higher
- ✓ 32-bit or 64-bit

## What is a quarantine network?

A VPN quarantine network is a virtual network that remotely connected machines are placed in. These quarantine areas are highly effective for keeping untrusted machines away from your core assets, while still providing a minimum level of connectivity to allow business to function. You may wish that certain PC's such as external B2B customers or consultants can connect to your network but with limited connectivity - regardless of their systems health status. Additionally, your own internal users can also be placed into the VPN quarantine network when they initially connect until the health state of their PC is proven. VPN-Q 2006 provides a simple and secure way to vouch for the health state of remote client PC's.
